飞行控制短片段翻译测试

控制器使用反馈跟踪参考轨迹。

正的稳定裕度不能保证在所有扰动下都安全。

采样率为 100 Hz，测得的延迟为 0.02 s。

标识符 CTRL-2026-A 和带符号数值 -0.25 必须保持不变。

强化学习策略使跟踪误差最小化。

```
J = 0.25 * e^2 + 0.02 * u^2
```

Flight Control Short Segment Translation Test

The controller uses feedback to track the reference trajectory .

A positive stability margin cannot guarantee safety under all disturbances .

The sampling rate is 100 Hz, and the measured delay is 0.02 s .

The identifier CTRL-2026-A and the signed numerical value -0.25 must remain unchanged.

The reinforcement learning policy minimizes the tracking error. .

```
J = 0.25 * e^2 + 0.02 * u^2
```
