Short flight-control translation fixture

The controller tracks a reference trajectory using feedback.

A positive stability margin does not guarantee safety under every disturbance.

The sampling rate is 100 Hz and the measured delay is 0.02 s.

Keep the identifier CTRL-2026-A and the signed value -0.25 unchanged.

The reinforcement learning policy minimizes tracking error.

```
J = 0.25 * e^2 + 0.02 * u^2
```

Project-authored synthetic fixture. MIT. Not a quotation from a paper.
